The Franklin Kiwanis Club is pleased to welcome you to the Seventh Annual Franklin-Sterling Mineral Exhibit.

This year we again urge you to inspect the Replica Mine atop the Buckwheat Dump. Learn how the Franklin ores were brought to the surface and listen to the explanation of mining operations on tours conducted through the Replica by retired miners.

This same building also houses the world's largest assemblage of fluorescent specimens simultaneously viewable under ultraviolet lamps. These lights were gratuitously provided by Ultra Violet Products, Inc., of San Gabriel, Calif.

Through the cooperation of the Franklin Borough Council, the Buckwheat Dump is open both days from dawn to dusk for all ticket holders to search for specimens. The Borough Fire Department has generously consented to wash down the Dump with their high pressure water hoses to remove dust and dirt and uncover new material so that you may more readily recognize mineral samples worth keeping.

We have undertaken this year, through the cooperation and assistance of Mr. John Baum, to display in one collection, one specimen of every mineral ever found in the Franklin-Sterling Area.

To our knowledge, this is the only time such a collection has ever been assembled.
